

learn@AP TECHNICAL WORKSHOPS FOR SOCIAL SECURITY SCHEMES

learn@AP's Technical Workshops for Social Security Schemes are designed with the objective to give participants a thorough understanding on the mathematical and technical aspects that underlies social security scheme benefit design and valuation.

Our workshops are customised to the specifics of your scheme and to the background of the participants. Participants would not only be able to relate to the workshop materials, but more importantly apply the knowledge gained from this workshop in their daily work.

Our modules include:

- Introduction to Social Security Mathematics
- Scheme Benefit Design
- Accounting Valuation and Funding Methods
- Experience Analysis

Drawing from our consultants' extensive experience, we deliver a highly effective, practical, interactive and fun workshop, designed specifically for social security practitioners.
